Committed to Students, Support and Service

Graham Fletcher K-6

Interested in developing ways to engage students in deep mathematical ideas and problem solving?

Join us to learn how to:

- Build a coherent K-6 systemic approach to infuse problem-based learning within the scope of instruction to connect math learning across grade levels.
- Identify ways in which problem-based lessons can be used to monitor student growth and deepen their mathematical understanding.
- Engage all students in real-world mathematical modeling through low floor/high ceiling 3-Act Tasks.
- Connect students' mathematical representations while supporting small group and whole class discussions.
- Build conceptual learning as students explore how this approach is instrumental in developing student understanding of multiple representations.

District and site leaders are encouraged to bring multi-grade level teams.
